

Physician Ownership

The physician performing procedures or other individuals assisting the physician, may have an ownership and/or financial interests in Stonebridge Surgery Center. An interest in the facility enables them to have a voice in the administration and medical policy of this health care institution. The involvement helps to ensure the finest quality surgical care for their patients. Patients have a choice as to where their ambulatory surgery is performed. If patients prefer to utilize another facility, please contact your physician.

We are proud that several physicians who provide healthcare services in this facility have chosen to also have ownership.
